## JCM Project Design Document Form

#### A. Project description

## A.1. Title of the JCM project

Introduction of High-efficiency Once-through Boiler in Film Factory

### A.2. General description of project and applied technologies and/or measures

The proposed JCM project aims to improve energy saving for steam supply by introducing a high-efficiency once-through boiler at a film factory in Indonesia. The film factory needs considerable energy, and boilers consume significant amount of energy at the film factory. The proposed project covers PET Film production process (especially drawing process) in the factory of PTMC Pet Film Indonesia in Cilegon City, Banten Province of Republic of Indonesia. The film factory introduced high efficiency once-through boiler (fuel: dual fuel of gas or oil) with replacing existing water tube boiler (fuel: oil), and increased the boiler efficiency and stable steam supply. For this, existing 6 ton/h water tube boiler was replaced with 4 ton/h high-efficiency once-through boiler.

## A.3. Location of project, including coordinates

| Country                     | Republic of Indonesia    |
|-----------------------------|--------------------------|
| Region/State/Province etc.: | Banten                   |
| City/Town/Community etc:    | Cilegon                  |
| Latitude, longitude         | S 5°58'04", E 106°00'09" |

#### A.4. Name of project participants

| The Republic of Indonesia | PT MC Pet Film Indonesia        |
|---------------------------|---------------------------------|
| Japan                     | Mitsubishi Chemical Corporation |
|                           | Nippon Koei Co., Ltd.           |

#### A.5. Duration

| Starting date of project operation       | 01/11/2016 |
|--|------------|
| Expected operational lifetime of project | 9 years    |

## A.6. Contribution from Japan

The proposed project was partially supported by the Ministry of Environment, Japan (MOEJ)

through the financing programme for JCM model projects, which provided financial support of less than half of the initial investment for the projects in order to acquire JCM credits. As for technology transfer, Kawasaki Thermal Engineering (KTE) has provided the following supports to MC Pet Film during commissioning test in Cilegon Factory (31/08/16).

- Direct instruction on proper operation of once-through boiler to boiler operators
- Effective periodical checks to maintain efficiency of the boiler (explanation by the staff of boiler manufacturer using maintenance manual)

# B. Application of an approved methodology(ies)

| B.1. Selection of methodology(ies)         |     |  |
|--|-----|--|
| Selected approved methodology No. ID_AM015 |     |  |
| Version number                             | 1.0 |  |

## B.2. Explanation of how the project meets eligibility criteria of the approved methodology

| Eligibility | Descriptions specified in the  | Project information   |
|-------------|--|---|
| criteria    | methodology  |   |
| Criterion 1 | The project boiler is a once-through<br>boiler with a rated capacity of 7<br>ton/hour per unit or less (equivalent<br>evaporation)                               | The project boiler is a once-through<br>boiler with a rated capacity of 4 ton/hour<br>(equivalent evaporation)  |
| Criterion 2 | Periodical check and maintenance<br>by the manufacturer of boiler or<br>authorized agent is implemented in<br>accordance with the manufacturer's<br>requirement. | MC Pet Film arranges necessary<br>periodical maintenance by authorized<br>agent (PT Gikoko Kogyo Indonesia)<br>and/or KTE in accordance with the<br>requirement of KTE. It is carried out<br>every 1 to 1.5 year.   |
| Criterion 3 | Appropriate water<br>purification/demineralization<br>system such as Reverse Osmosis<br>(RO) membrane treatment is<br>installed.                                 | MC Pet Film purchases the<br>demineralized water from PT Mitsubishi<br>Chemical Indonesia for operation of<br>project boiler.<br>The boiler water is treated with Ultra<br>Filtration, RO, mixed bed resin system<br>and mixed bed ion exchange<br>demineralization system. |

| C. Calculation of emission reductions   |          |  |
|---|----------|--|
| C.1. All emission sources and their associated greenhouse gases relevant to the JCM project |          |  |
| Reference emissions   |          |  |
| Emission sources  | GHG type |  |

| Fuel consumption by reference boiler     | CO <sub>2</sub> |  |
|--|-----------------|--|
| Project emissions                        |                 |  |
| Emission sources                         | GHG type        |  |
| Fuel consumption (gas) by project boiler | CO <sub>2</sub> |  |

# C.2. Figure of all emission sources and monitoring points relevant to the JCM project

| Year | Estimated Reference            | Estimated Project              | Estimated Emission              |
|------|--------------------------------|--------------------------------|---------------------------------|
|      | emissions (tCO <sub>2</sub> e) | Emissions (tCO <sub>2</sub> e) | Reductions (tCO <sub>2</sub> e) |
| 2013 | -                              | -                              | -                               |
| 2014 | -                              | -                              | -                               |
| 2015 | -                              | -                              | -                               |
| 2016 | 400.2                          | 295.9                          | 104                             |
| 2017 | 3,499.0                        | 2,587.5                        | 911                             |
| 2018 | 1,843.3                        | 1,363.1                        | 480                             |
| 2019 | 1,843.3                        | 1,363.1                        | 480                             |
| 2020 | 3,499.0                        | 2,587.5                        | 911                             |
| 2021 | 3,686.5                        | 2,726.2                        | 960                             |
| 2022 | 3,499.0                        | 2,587.5                        | 911                             |
| 2023 | 3,499.0                        | 2,587.5                        | 911                             |
| 2024 | 3,686.5                        | 2,726.2                        | 960                             |

| 2025                       | 2915.8 | 2156.2 | 759   |
|----------------------------|--------|--------|-------|
| 2026                       | -      | -      | -     |
| 2027                       | -      | -      | -     |
| 2028                       | -      | -      | -     |
| 2029                       | -      | -      | -     |
| 2030                       | -      | -      | -     |
| Total (tCO <sub>2</sub> e) |        |        | 7,387 |

Note:

The estimated emission reductions in each year are rounded down after the decimal point.

| D. Environmental impact assessment                       |    |  |
|--|----|--|
| Legal requirement of environmental impact assessment for | No |  |
| the proposed project                                     |    |  |

#### E. Local stakeholder consultation

E.1. Solicitation of comments from local stakeholders

The local stakeholder meeting was held at the meeting room of Regional Development Planning Board of Cilegon City on 24 May 2017.

The list of participants:

National and regional government staff

- Coordinating Ministry of Economy Affairs
- Regional Secretary of Cilegon City
- Regional Development Planning Board of Cilegon City
- Department of the Environment of Cilegon City
- Department of Industry and Trade of Cilegon City
- Indonesia JCM Secretariat

A meeting with the staff of PT MC Pet Film Indonesia was also conducted at the meeting room of their factory on 06 March 2017. The outline of JCM and its procedures were presented by Nippon Koei Co., Ltd. The factory staff mentioned that they are satisfied with the stable performance of boiler and easy operations.

| Stakeholders                                 | Comments received                         | Consideration of comments received    |
|--|---|---------------------------------------|
| PT MC Pet                                    | Fuel switch could reduce the              | No action is needed.                  |
| Film Indonesia operation cost and the boiler |   |                                       |
|  | running stably.                           |                                       |
